SUMMARY

- Good understanding of algorithms, data structures, and computer science fundamentals.
- Most experienced with C++. Experienced Java, Javascript, and Python.

EDUCATION

- **University of Engineering and Technology - Vietnam National University** Sep. 2017 – Jun. 2021
 - *Bachelor of Computer Science; GPA: 3.71/4.00 (Up to 4th semester).*
 - Scholarships for Top 10% students with the best academic results for three consecutive semesters.
 - Scholarships from Vingroup for 10 students in my university with the best academic results and outstanding achievement in research or olympiads.
 - One of the 19 most outstanding students in my university who were awarded the title of 'Student with 5 merits' (Morality, Knowledge, Physical Health, Social Skills, and Integration Competence) in the academic year 2018-2019.

ACHIEVEMENTS AND AWARDS

- **International Collegiate Programming Contest (ICPC)** 2017-2019
 - Competed in a team of three to solve 10 to 13 algorithmic problems in 5 hours using C++.
 - ICPC Asia Danang Regional 2019 **Silver Medal (Ranked 9 / 112).**
 - ICPC Vietnam National Round 2019 - **Ranked 8 / 262.**
 - ICPC Vietnam National Round 2018 - **Ranked 35 / 236.**
 - ICPC Vietnam National Round 2017 - **Ranked 49 / 198.**
- **Gameloft AI Contest** 2018
 - Wrote an AI BOT competing with other participants' in a designed game.
 - **Third Prize (Top 8/100)**
- **Vietnam National Olympiad in Informatics** 2016
 - **Second Prize (Ranked 15/300).**

PROJECTS

- **C++ Simple HTTP Server** Dec. 2019
 - Worked on a solo project to make a simple HTTP (1.1) Server using C++ without any third-party library.
 - The server accepts and monitors multiple connections by the Linux's epoll. The server will process the requests with a Thread Pool to respond as text or files.
 - As tested with wrk on a common personal laptop, it could handle more than 10000 connections and more than 100000 simple requests per second.
 - I work on this project just to explore more about Socket programming, Linux, Computer networking and to master the modern C++.
- **COPE - CSP Online Practice Environment** Sept. 2017 – Sept. 2019
 - Gathered and led a student team to make and deploy an automatic grading system from scratch with various technologies (PHP, ReactJS, NodeJS) over its versions.
 - The system is responsible for saving algorithmic problems' information, managing students' statistics and judging untrusted source codes.
 - This system now has more than 500 problems and 100 students practicing actively.
 - This first technical project gave me the soonest understanding and skills in many fields: Back-end, Front-end, Git, Team-working, Linux environment, Security, Networking, Operating System.
- **Dictionary (Desktop, Mobile)** Oct. 2018 - Nov. 2018
 - Worked as a team of two members in a project for Object-Oriented Programming class at my university.
 - We made a dictionary with JavaFX, SQLite for the desktop version. I personally made a mobile version of the dictionary with React Native (for Android), using Java native modules from the desktop version.
 - From this project, I learned more about Object-Oriented Programming and got familiar with mobile development as well as React Native.

EXPERIENCE

- **Teko Vietnam** Jun. 2019 – Dec. 2019
 - *Software Engineering Intern (part-time)*
 - Trained to design and implement a website for both front-end (ReactJS) and back-end (Flask, Docker, MySQL).
 - Helped the front-end team build a mobile web version of the company's new e-commerce website with a clean and reusable code following the Scrum development process.
 - Language/Technology: **Git, ReactJS (TypeScript)**.
 - From this internship, I had the experience to work with my team and other teams in an agile development process. I also gained more skills with React and Git. Thanks to my mentors' code review sessions, my code is now much prettier.
- **Monkey Junior** Jun. 2018 – Sep. 2018
 - *Game Development Intern*
 - Implemented mini-games for the Monkey Junior - an educational app for children which has had more than 1 million downloads on Google Play.
 - Language/Technology: **Cocos2d-x, C++**.
 - This position is my first experience in an industrial environment. I gained a better understanding of OOP and C++ (about its memory management, pointers, heap, stack - which I hadn't noticed before).

ACTIVITIES

- **MASSP AI Mentor** Jul. 2019
 - Prepared and executed daily lesson plans for the classroom of 20 students about Machine Learning.
 - Provided guidance for students on their Deep Learning projects.
- **Big-O Coding Tutor** Feb. 2018 - May. 2018
 - Supported the lecturer to teach algorithms for VNPT Hanoi's employees.
