EDUCATION

- **University of Engineering and Technology - Vietnam National University** Sep. 2017 – Jun. 2021
 - *Bachelor of Computer Science; GPA: 3.74/4.00 (Up to 6th semester).*
 - Scholarships for Top 10% students with the best academic results for 5/6 semesters.
 - Scholarships from Vingroup for 10 students in my university with the best academic results and outstanding achievement.
 - **Relevant courses:** Data Structures and Algorithms, Object-Oriented Programming, Principles of Operating System, Computer Networking, Database, Software Development, Computer Organization, Artificial Intelligence, Probability and Statistics, Linear Algebra, Calculus, Optimization, Computer Graphic, ...

ACHIEVEMENTS AND AWARDS

- **International Collegiate Programming Contest (ICPC)** 2019
 - ICPC Asia Danang Regional 2019 9th place out of 112 International teams. Silver Medal.
 - ICPC Vietnam National Round 2019 8th place out of 262 National teams.
- **Septech Code War. Winner (1st place out of 62 university students).** 2019
- **Gameloft AI Contest** 2018
 - Wrote an AI BOT competing with other engineers' and students' in a designed game.
 - **Third Prize (Top 8 in 100 participants)**

TECHNICAL SKILLS

- **Languages:** C++, Python, Java, Javascript, SQL, R
- **Technologies:** MySQL, Django, Gunicorn, Flask, ReactJS, NodeJS, Ansible, AWS, Git, Docker
- **Experiences:** Linux, Micro Service, Event Loop, Multi-Threading

PROJECTS

- **C++ Simple HTTP Server** Dec. 2019
 - Worked on a solo project to make a simple HTTP (1.1) Server using C++ without any third-party library.
 - As tested with **wrk** on a common personal laptop, it could handle more than 10000 concurrent connections and could serve about 100000 simple requests (getting HTML file and the corresponding CSS, JS files) per second.
 - This project helped me understand more about Socket programming, Linux, Computer networking, and Event Loop.
- **COPE - CSP Online Practice Environment** Sept. 2017 – Sept. 2019
 - Gathered and led a student team to develop and deploy an automatic grading system from scratch with various technologies (PHP, ReactJS, NodeJS) over its versions.
 - The system is used for managing algorithmic problems' information, usage statistics, and judging untrusted source codes.
 - It is being used now by over 1000 students in my high school to learn the IT subject.
 - As the founder and also a programmer of this technical project, I gained the soonest understanding and skills in many fields: Back-end, Front-end, Git, Team-working, Linux environment, Security, Networking, Operating System.

EXPERIENCE

- **SEA Group** Aug. 2020 – Oct. 2020
 - *Software Engineering Intern (Backend, full-time)*
 - Built and deployed an Event-Management System on AWS for the Entry task.
 - Wrote unit tests for the project and increased test coverage from 51% to 80%.
 - Did optimizations on the Gitlab-CI job, which decrease smoke test running time by over 50 seconds.
 - Joined a product team to develop a micro-service internal system that serves the company's business. It is being used in Thailand, Indonesia, and Vietnam.
 - Languages/Technologies: **Python, Django, Django Rest Framework, Gunicorn, Ansible, MySQL, AWS.**
 - This internship helped me know to do things in detail. I was able to analyze MySQL query performance, to stably serve a process on the server, and to write cleaner code.
- **Teko Vietnam** Jul. 2019 – Dec. 2019
 - *Software Engineering Intern (Frontend, part-time)*
 - Trained to design and implement an account management website for both front-end and back-end.
 - Helped the front-end team build a mobile web version of the company's new e-commerce website with a clean and reusable code following the Scrum development process.
 - Languages/Technologies: **Git, ReactJS (TypeScript), Flask, Docker, MySQL.**
 - From this internship, I had the experience to work with my team and other teams in an agile development process. I also gained more skills with React and Git. Thanks to my mentors' code review sessions, my code is now much prettier.
